RELEVANT PROJECTS:
Liri Bot – NodeJS project that takes 4 different commands from a user which in turn uses NPM to pull content from OMDB API, Twitter API, and Spotify API. https://github.com/kimmie10/liri-node-app/

Event Finders – Collaborative project building a website that allows a user to find relevant events in any city in the United States they choose powered by Eventbrite. The site gives a 5-day forecast for the five days preceding the lookup of events powered by Open Weather Map API and a helpful map with events flagged which are clickable powered by Leaflet Map. https://kimmie10.github.io/Event-Finders/

Biblioteca -- Website that allows users to post books to a list and see books others have posted, complete with a link to purchase, a short description of the plot and some information about the author. https://biblioteca-cgkp.herokuapp.com/
